More and more weather and climate science has been at the intersection of interdisciplinary studies that deal with complex environmental and social problems. Therefore, teaching and researching about weather and climate is important in different disciplines outside of climatology and/or atmospheric sciences. Though mostly founded in physical geography, climatologists are demanded in several academic and professional areas. This panel is composed of scholars that attended the same Geography doctoral degree program at the University of Georgia and have now diversified in the type of institutions they work, and/or the departments and fields of research that they engage in. Whether in Design or Geosciences, the panelists will show how weather and climate continues to be at the core of their work. In this session, we will discuss how their current jobs, teaching, and/or research are addressing weather and climate while engaging with other disciplines.
